February 2017

Construction underway on US 181 Harbor Bridge Project

Construction on the new Harbor Bridge Project is off to a smooth start. FDLLC skilled craft workers have been training and preparing the project site as construction has kicked off on the north side of the channel. Current, day-to-day operations consist of training crew members on the newest equipment, including 200-ton cranes that will be used to lift rebar and concrete needed for construction. Additionally, crews are completing mandatory testing and certification requirements for equipment and materials. One of the first construction activities underway, is the site preparation for the drilling of the shafts on the north tower of the bridge. Over in Robstown, site prep is underway for the pre-cast yard where concrete segments will be produced and delivered to the project site for bridge construction. As the project schedule progresses and construction efforts amplify, safety continues to remain the top priority.
